

Commonly Used Optical Splitter Types in Installation and Maintenance

Overview

Fiber splitters are broadly categorized into two types: FBT (Fused Biconical Taper) splitters and PLC (Planar Lightwave Circuit) splitters. Construction: Made by fusing and tapering two or more fibers together. What Is an Optical Splitter Fiber and Why Do You Need One?

At its core, an optical splitter fiber is a device. A fiber optic splitter is a passive optical component that divides a single incoming optical signal into two or more outgoing signals, or combines multiple incoming signals into one. Selecting the right fiber optic splitter type can. Bandwidth is shared amongst customers in a PON, and the bandwidth received by a customer is not related to the power received at the optical network terminal (ONT) as long as the power is high enough so the ONT can operate. Conversely, it can also combine multiple signals into one. Its primary role is in Passive Optical Networks (PON), which are the foundation of.
