VRRP is a popular protocol for providing device redundancy, for connecting redundant WAN gateway routers or server access switches. It allows a backup router or switch to automatically take over if the primary (master) router or switch fails. There are only small command differences. Here, you will learn How to. Configure virtual router redundancy protocol (VRRP)_on your device with the steps and examples below. routing-options] hierarchy level. The Virtual Router Redundancy Protocol (VRRP) groups multiple routing devices into a virtual router. "Feature Typical Configuration Examples" provides.
