

Current carrying capacity of high voltage switchgear busbar

Overview

For copper busbars, IEC 61439-1 and common engineering practice recommend 1. The busbar sizing calculator determines the required busbar dimensions based on the continuous current rating, short circuit withstand, and thermal limits for switchgear assemblies. The current rating is calculated from the conductor cross-sectional area, material (copper or aluminium), and maximum. The IEC standard for busbar sizing provides detailed guidelines to help engineers select appropriate busbar dimensions. This ensures that systems operate reliably without overheating or causing electrical hazards. The International Electrotechnical Commission (IEC) issues globally accepted. Industrial high-voltage switchgear uses 100x10mm copper busbars (1850A ampacity) for a 3000A rated current. This guide is written for engineers, EPC teams, and procurement managers who need clear equipment decisions, RFQ details, and commissioning checks.
