

Device small bus power supply

Overview

The Small Supply / Bus is a combination of a power supply and a busboard with 12 connectors for Eurorack modules. It is intended for DIY applications where a maximum power consumption of 380mA is sufficient. The universal power supply can be used world-wide and it even has an IEC mains inlet. The. In a DALI (Digital Addressable Lighting Interface) system, the power supply is the lifeline of the communication bus. While luminaires, sensors, and controllers perform the functional tasks, the bus voltage ensures reliable signaling across all connected devices. The DALI PS2 80mA powers DALI systems up to 40 devices. With 110-240V input voltage and short-circuit protection, it's suitable for. Every DALI system requires a DALI bus power supply. A maximum of 64 addresses can be assigned on the DALI bus. In addition, the 320 mA and 640 mA versions are available with. The Bus Power Supply provides the power to the Bus Ethernet Gateway (C4-DIN-BEG) and Control4 wired keypads (C4-KCB-xx and C4-SKCB-xx) in a Panelized Lighting system.
