Smart digital relays will enable faster fault detection and adaptive protection schemes, reducing. Working Group H9 of the IEEE Power System Relaying Committee Gary Michel Chairman, Greg Pleinka Vice Chairman, Mark Adamiak, Ken Behrendt, Doug Dawson, Ken Fodero, William Higinbotham, Gary Hoffman, Chris Huntley, Bill Lowe, Jerry Johnson, Ken Martin, Tim Phillippe, Roger Ray, Mark Simon, John. Virtual Protection Relays (VPRs) are a major step in this evolution. Instead of using dedicated hardware devices, protection functions now run as software on virtual machines or high-performance computing platforms. The process bus solution is implemented by introducing new equipment called Merging Units (MU) near the primary equipment in the switchyard. However, their. This transformation not only enhances the performance of relay protection systems but also provides valuable real-time data and analytics that can be utilized to optimize the overall network operation.
