

Does having all the optical splitters plugged in affect internet speed

Overview

However, the use of a splitter can potentially impact internet speed, as the signal is being split and distributed among multiple devices. This can lead to a reduction in signal strength and quality, resulting in slower internet speeds. There are generally two main types of splitters in the realm of internet connectivity: DSL Splitters: Primarily used with Digital Subscriber Line connections, allowing voice and data to travel over the same line without interference. But can these seemingly harmless devices. When I try speed test with this setup, I get ~30 Mbps download speeds: []---router---PC []---MoCA device / empty In the above setup, the MoCA device paired at another coax port also got same speeds. (If you don't know, MoCA lets you network using coax cables instead of ethernet, not important. Several factors can affect the speed of your internet connection when using a splitter. It's. In the backbone of modern Fiber-to-the-Home (FTTH) networks, optical splitters serve as the unsung heroes that enable cost-efficient connectivity for millions of subscribers.
