

Electricians directly cut fiber optic cables

Overview

Yes, you can cut fiber optic light cables, but it requires precision and the right tools to ensure the integrity of the fiber for signal transmission. Back in the late 1980s, when fiber was new and before structured cabling for premises applications became a TIA standard, I was working to train electricians in fiber optic installation. Electricians first became aware of fiber optics because electrical utilities were early adopters. Back in the. We install, terminate, test and maintain multi-mode (OM1, OM2, OM3, OM4 & OM5) and single-mode (OS1 and OS2) LAN, WAN & telecoms fibre optic cables, as well as fixing broken, damaged or cut cables. They transmit data as pulses of light through strands of glass or plastic, providing high-speed internet, seamless data exchange, and efficient signal distribution. Or course with either option one needs a fiber stripper and a cleaver It's massively different than splicing or terminating copper wiring (such as RJ-45 Ethernet or RJ-11 phone). Leave it to the service technicians. There will be Kevlar fibers protruding, as well as two or three.
