

Expansion of cable tray suspension rods

Overview

Cable trays have no space to flex, and may bend or break bolts. When developing our cable support OBO can offer reliable solutions for systems, three attributes are at the routing and fastening cables securely core of what we do: efficiency, resil- for each of these installation challeng-ience and safety. Cable ladder systems and cable tray systems shall be manufactured in accordance with BS EN 61537, channel support. There are expansion joint splice plates and bonding jumpers available from cable tray manufacturers. The expansion clamp portion (102) is configured to loosely engage. The work covered under this section consists of the furnishing of all necessary labor, supervision, materials, equipment, tests and services to install complete cable tray systems as shown on the drawings. We aim to ensure your project remains secure and does not breach the NEMA standards, causing it to suffer.
