

Fiber optic cables can be configured with multiple routers

Overview

Yes, you can connect two routers to one fiber modem, but understanding the 'how' and 'why' is crucial for optimal network performance. Assume you have house with direct access to an optic fibre cable (FTTP). In the basement, there is the ONT+residential gateway device that converts the light impulses to Ethernet. This setup has to be changed because the house will be. Are all the strands in the optic fiber cable gonna work at the same time and are they compatible with the transceivers?

Thank you yes, for single-mode modules, you'll need single mode fiber/cable. This ethernet will then go through a 1 Gbit/s switch, and rout two ethernet cables to each floor. On each floor each ethernet cable will be connected to a router, which will then distribute the internet. Fiber optic technology represents a revolutionary advancement in connectivity, transmitting data via pulses of light through thin strands of glass or plastic fibers.
