

Forced static electricity on optical fiber optic cable

Overview

Disruptions in connectivity: A buildup of static electricity on fiber optic end-faces can cause intermittent or complete disruptions in connectivity. This can lead to network downtime and negatively impact overall system performance. Static charges, also known as triboelectric charges, are the result of an imbalance in the distribution of electric charges on the surface of an object. If so, your optical inspection at 200/400+ will detect it. There are several sources of contamination, but one of the most challenging to manage is dust. Proper cleaning tools and techniques can help ensure trouble-free connectivity. A well-engineered cleaning stick makes incidental contact with the alignment-sleeve sidewalls, allowing fluid from. Sticklers CleanWipe Singles can be used in harsh environments with the Cleaning Fluid to get perfectly clean connectors under the most challenging circumstances. Anytime creates a static charge.
