

G652 type optical fiber

Overview

The standard specifies the geometrical, mechanical, and transmission attributes of a single-mode optical fibre as well as its cable. The fibre has zero-dispersion wavelength around 1310 nm as per how it was designed, however it can also be used in the 1550 nm wavelength region. G.652 is an ITU-T standard that describes the geometrical, mechanical, and transmission attributes of a single-mode optical fibre and cable, developed by the ITU-T Study Group XV. G.652 was originally developed in 1984 by ITU-T Study Group XV. Subsequently, revisions were published in 1988, 1993, 1997, 2000, 2003, 2005, 2009, 2016, and 2024 (from 1997 as Study Group 15).
