

How many gigabit does the OM1 multimode fiber optic cable support

Overview

OM1 fiber optic cables can support data transmission of up to 1 Gbps over a distance of 275 meters and 10 Gbps over a distance of 33 meters. There are several kinds of multimode fiber types available for high-speed network installations, and each with a different reach and data-rate capability. With so, ISO/IEC 11801 defines the OM1, OM2, OM3, OM4, and OM5 types of multimode fiber. It also lists the key technical requirements for each type. These differences include the maximum distance and speed. For example, OM1 supports a 1Gbps speed with a 275MHz bandwidth, while OM5 handles 100Gbps with a 2GHz bandwidth. OM3 supports. OM1 fiber delivers 200 MHz·km maximum bandwidth. You get 10 GbE reach up to 82 meters. While still found in legacy systems, it is rarely used in new installations. OM2 offers improved performance over OM1, with 1GB transmission.
