

Is the 850 optical module multimode

Overview

The selected wavelength determines fiber compatibility. 850 nm SFP modules are designed for multimode fiber (MMF), where modal dispersion limits transmission distance but enables cost-effective short-reach links. Leveraging VCSEL (Vertical-Cavity Surface-Emitting Laser) technology, 850nm modules offer low power consumption, high compatibility, and strong. As an industry-leading ICT infrastructure and industry solution provider, Ruijie offers customers a wide variety of high-density and low-power 10G optical modules. They are applicable to data center and campus networks, enabling cost-effective, efficient, and high-speed interconnection among. Multi-mode optical fiber is a type of optical fiber mostly used for communication over short distances, such as within a building or on a campus. In fiber optic communications, there are single mode and multi-mode optical fibers.
