

Is there a correct orientation when plugging a fiber optic cable into a router

Overview

The cable should be bent as little as possible. Where reels are supplied with protective material fitted over the cable, the protection should remain in place until the cable will be installed. Turn-backs and all sharp changes of direction. To connect your fiber optic cable to a router, ensure you have the following: Fiber optic modem (ONT): Most fiber connections require an Optical Network Terminal (ONT), provided by your ISP. Compatible router: Verify that your router supports fiber optic input (look for an SFP or WAN port labeled). When pulling long lengths of cable in conduit or innerduct (up to approximately 3 miles or 5 kilometers in the outside plant, hundreds of meters in premises cabling), use proper lubricants and make sure they are compatible with the cable jacket. Use a pulling grip. Never directly pull on the fiber itself. You should pull on the fiber cable strength members only! Never exceed the maximum pulling load rating.
