

Method for wrapping fiber optic cable around the top of a power pole

Overview

This technique takes a small, lightweight fiber optic cable and wraps it around or lashes it to the power line. The cable is called optical power attached cable (OPAC), and it is lashed to the power cable with a specialized tool that is pulled from the ground, such as a cable. Optical attached cable (OPAC) is a type of fibre-optic cable that is installed by being attached to a host conductor along overhead power lines. Installation is typically performed using a. Deploying fiber above ground on poles or towers removes the need for underground digging and is particularly useful when the ground is uneven, rocky or both. During installation, all curvatures should be smooth. Do not step on cables, cable enclosures, or. The purpose of this document is to provide guidance on the installation requirements for fibre optic wrap onto overhead conductors installed on wood poles or tower lines located on the Northern Powergrid distribution system.
