

OPGW 24-core fiber optic cable splicing sequence

Overview

The diagram of 24 core fiber fusion splicing sequence is an essential tool for engineers in the telecommunications industry. This article provides a detailed explanation of the sequence, covering four aspects: preparation, stripping and cleaning, fusion splicing, and testing. Application ranges from aerial, uct to buried. Splicing OPGW (Optical Ground Wire) cables requires following several precise steps—establishing site safety, preparing the cable, accessing the fibers, performing the splice with a fusion splicer, sealing the splice with a heat shrink sleeve, and finally installing the splice in a closure. Hence, it is specifically made with an armour of metal on the outside to protect the enclosure from electrical fields. Quality during Coiling of OPGW near Joint.
