

# Optical Module Adhesive

## Overview

Optical bonding adhesive is a specialized bonding material that affixes optical components, such as camera lenses, sensors, and protective covers, while maintaining clarity, environmental resistance, and precise alignment. Dymax 9803 low shrinkage optical epoxy adhesive offers superior adhesion for common substrates used in camera modules and LiDAR assemblies, in active alignment, and other optical bonding applications. The adhesive has the unique flexibility to cure in seconds with LED and/or UV/Visible light as. Optical adhesives are supporting advances in optical assemblies, collections of optical components and mechanical parts that precisely manipulate light for focusing, imaging, and beam shaping. These include the active alignment of the lens package to the image sensor, the attachment of the lens barrel and the voice coil motor (actuator).
