

Relay protection fast switching device

Overview

It automatically transfers power with an ultra-fast switching time of up to 10ms, ensuring process continuity and equipment safety. 118 and IEC 61000-4-30 standards. ABB's Ultra-Fast Earthing Switch (UFES) is an advanced protection device designed to drastically reduce the damage and danger caused by internal arc faults in low- and medium-voltage switchgear. It serves as an active arc fault mitigation system, operating much faster than traditional protection. SIPROTEC 5, built on extensive field experience, offers comprehensive functionalities and device types for modern electrical energy systems. This tool gives a quick guidance to find a SIPROTEC 5 protection relay. Eaton's protective relays provide you with unique microprocessor-based devices that eliminate unnecessary trips, mitigate arc faults, protect motors and breakers, and provide system information to help you better manage your system. Featuring both basic and reinforced isolated switches and drivers, TI's SSRs offer a total solution alternative to electro-mechanical and optical relays via industry-leading capacitive and magnetic isolation.
