

Requirements for incoming lines to explosion-proof network cabinets

Overview

A specification for explosion proof distribution cabinets must include detailed electrical components for hazardous areas, enclosure materials, and cable entry systems. We give you an overview of the most important regulations and. This manual contains notices you have to observe in order to ensure your personal safety, as well as to prevent damage to property. The notices referring to your personal safety are highlighted in the manual by a safety alert symbol, notices referring only to property damage have no safety alert. This is limited to explosive atmospheres due to gas and leaving out the 'Ex n' and 'Ex i' methods of protection in this article. Generally cables enter devices in three ways: indirectly through the interposition of an increased safety case used as a terminal box. Some examples are IEC hazardous area designations, NEC Article 505, NFPA 496, and NEMA ratings.
