

Setting up an environment for an aggregation switch

Overview

This page describes how Aruba aggregation switches are configured. Switch models used: JL635A Aruba 8325-48Y8C They run in a high availability pair and use VSX to provide redundancy. Managed switches provide many advantages for a growing network, including support for VLANs, QoS, and Trunking. In this article, I'm going to describe how to set up Link Aggregation between two managed switches to provide connectivity. Core switches set up a CSS that functions as the core of the entire campus network to implement high network reliability and forwarding of a large amount of data. In addition, core switches are configured with the native AC function to manage APs and transmit wireless service traffic on the entire. It is intended for administrators responsible for installing, configuring, and managing Aruba switches on a network. Updates to this document can occur after initial publication. For LAG control, the FortiSwitch unit supports the industry-standard Link Aggregation Control Protocol (LACP). Three connections between the.
