

Should two switches be cascaded using fiber optic or network cable

Overview

If you have multiple Ethernet switches that need to be connected over long distances, fiber is obviously a preferred choice. Moreover, when it comes to bandwidth, no currently available technology is better than single-mode fiber. It can provide significantly higher bandwidth and carry more data. I am planning to connect core switch to multiple switches using 6 strand fiber cable. which type of connection is resilient Star or Ring?

?

?

If I make star then do i have to use new cable to each switch or strand of a cable to patch other switch?

?

Thanks. It usually depends on the model of the switches. Can two switches with fiber ports be directly connected through fiber ports?

The answer is yes. The mainline of the fiber optic LAN directly connects to the switch, then to the router. Cascading connections form a link by connecting the ports of one switch to the ports of another switch, and larger networks can be. Need advise on connecting the fiber cable between two switches. We have existing core switch model C9300-NM-8X, we are extended small office same building in different floor.
