

The next era of the Internet is energy

Overview

To realize renewable-energy-based electrification goals, a new concept the Energy Internet (EI) has been proposed, inspired by the most recent advances in information and telecommunication network technologies. Recently, many measures have also been taken to practically. Leaders are gathering at the World Economic Forum Annual Meeting 2026 to explore how the ethical use of AI and other emerging technologies will translate into solutions for real-world challenges. The reach and impact of AI across industries will be as ubiquitous as electricity. The report examines the impact of digital technologies on energy demand sectors, looks at how energy suppliers can use digital tools to. This work was supported in part by the Academy of Finland EE-IoT Project under Grant 319009, in part by the FIREMAN Consortium CHIST-ERA under Grant 326270, and in part by the EnergyNet Research Fellowship under Grant 321265 and Grant 328869. Artificial intelligence (AI) is redefining global energy infrastructure.
