

The power supply cabinet provides relay protection

Overview

The protection relay inside the cabinet detects the abnormal current, trips the necessary breaker to prevent equipment damage, and sends a real-time alert to the plant's SCADA system so maintenance can respond immediately. Production downtime is minimized, and equipment. Cabinets and devices of relay protection and automation (RPA) manufactured by Radiy are a modern solution for control, automation, protection, monitoring and signaling at power facilities. Long term cost reduction (TCO) for trainings and maintenance by reduce variety of relays A fast and selective arc fault mitigation for air-insulated LV & MV switchgear and Relion protection and control relays and sensor. Protective relays and devices have been developed over 100 years ago to provide “lastline” of defense for the electrical systems. Water treatment facilities: Control devices in the cabinet manage pump sequencing to ensure uninterrupted flow during peak demand. It helps protect, control, and distribute electricity safely in industrial, commercial, and renewable energy applications.
