

The router's fiber optic indicator light remains blue

Overview

Off: The router is not detecting the DSL or fiber signal at all. Some routers have USB ports that allow you to connect external devices like hard drives or printers. Typically, these lights correspond to various router functions such as power. The good news is that there's a relatively quick fix and several other things you can try to rectify the issue of blue light on router but no internet. If your router is on, as indicated by the blue light, but you can't access the internet, the best way to resolve the issue is to perform a hard. The tables in this article provide detailed information about the possible appearances of the LED lights on each device, the possible causes of each state, and what you should do. Ensure your Fiber Jack is connected to the network and the LED lights are connected and working properly before moving. The LEDs on your modem, optical network terminal (ONT), router, or modem/router combo (gateway) are most likely blinking because they're communicating what the device is doing, or there's an error.
