

The switch s optical port light remains on

Overview

The port is receiving light or carrier, but is not online. Verify that the diagnostic tests are not being run. The port mode determines the type of information shown by the port LEDs. These LEDs are located above each pair of Fibre Channel ports. The port status LEDs for the FC ports are arranged left and. The auto-channelization feature actually depends on the data received on the interface to channelize. We are experiencing issues with our optical ports between QFX5100 and EX4300 since we rebooted our EX4300 switch. Module temperature :. Switches have LEDs for indicating power status, port status, link status, error indication, troubleshooting and performance monitoring. Even though the line was disconnected and nothing else was connecting to it, the port showed as active and the LED was even blinking like. This manual contains notices you have to observe in order to ensure your personal safety, as well as to prevent damage to property.
