

UPS upstream distribution box

Overview

A UPS distribution box is a critical electrical component that manages and distributes power from an uninterruptible power supply (UPS) system to connected equipment. These boxes ensure reliable power delivery during outages and are widely used in commercial, industrial, and data. UPS Supply Chain Solutions offers comprehensive distribution solutions, including storage, warehousing, transportation management, returns, fulfillment and more. For installation flexibility, the Liebert GXT4 UPS's (5kVA to 10kVA) allow you to choose from several different input/output power wiring configurations made possible by the use of removable power distribution boxes (PODs) that simply plug into the rear of the UPS. This handbook is your one-stop source for essential information. All wiring must comply with all applicable national and/or electrical codes. The maximum allowable cable size is 4/0 AWG. Cable sizes in this manual. eds to be designed depending on the chosen type of UPS configuration. We will focus on the low voltage double conversion UPS a ion is to provide clean and continuous power to the downstream loads.
