

What to do if dust gets inside the optical power meter

Overview

Sensor and Ports: Regularly clean the sensor and input ports using isopropyl alcohol and lint-free wipes to remove any dust or contaminants. **Storage:** Store the optical power meter in a clean, dry environment when not in use. Below are general answers on how to operate, maintain, and calibrate an optical fiber ranger from the list of GAO Tek's optical power meters. **Power On:** Ensure the device is charged or properly connected to a power source. **Select. nstrument,** check to see whether it was damaged in transit. Doing so can cause f tery indicator on the screen to show the remaining. What maintenance actions should be taken if dust accumulation is suspected on optical sensors in the reject system?

Power Down and Lockout: Ensure the system is powered down and properly locked out/tagged out to prevent accidental activation. **Access the Sensor:** Open or remove any covers or guards. As dust collects inside the equipment, there's also a possibility that the equipment itself could be damaged. If dust manages to collect on exposed wires or circuit. power across any given fiber. Consistent procedures ensure accuracy.
