

Will a short optical jumper wire burn out the optical module

Overview

The use of long-haul transmission optical module in short-haul transmission will lead to excessive receiving optical power and burnout of optical module. In this case an SFP transceiver of type Cisco SFP-10G-LR. There is a minimum distance spec of 2meter published by the. This is common in long-distance transmission modules: when connected to very short-distance optical fibers, the received optical power may far exceed its overload power, causing the optical detector t This is common in long-distance transmission modules: when connected to very short-distance. Optical module is divided into short distance, medium distance and long distance transmission, each should be used in corresponding working environment. According to the type of optical fiber, there are mainly two types: single-mode optical fiber and multi-mode optical fiber. Because I have to, its not a choice I have.
